

In keeping with our tradition of providing you with great products and ongoing customer service, we have corrected some minor issues with Jewelry Designer Manager Pro and highly recommend that you download and install the JDM Standard 2.08 version.

THIS UPDATE IS FOR USERS WHO HAVE JDM Pro. Please check the Version and date of your program on the bottom left of the main menu. Updates are free for one year from purchase or with a current [Annual Maintenance](#) agreement. For more information please visit the website Support page.

Please Note: Please locate your CD key before you install the update. It is located on your jewel case or on the order confirmation if you ordered a download.

INSTRUCTIONS

Please make a backup of your files before you begin. If for some reason you don't like the update this will allow you to go back to the previous version. Use Jewelry Designer Manager or Windows Explorer to back up or rename the files. (If you are unfamiliar with Explorer and need help, please give us a call. We will be happy to help you over the phone.) The two files you need to back up are: JDMDData.mdb and JDM.mde. JDMDData.mdb contains all your data and is the most important file. JDM.mde is the program in case you want to revert back.

1. **Make sure you have a backup as explained above.**
2. Start the Download of JDM Standard Version 2.08 Update from the website.
3. In the Download dialog box choose "Save" and save the file **JDMStandard208Update20091108Setup.exe** to a folder on your computer and run it from there.
4. The Setup program will install the file to the appropriate location. When it is finished start Jewelry Designer Manager from the icon on the desktop. You should see Version 2.08 dated 11/08/2009 on the bottom left of the Main Menu.

List of new features and modifications:

Version 2.08 11/08/09

1. Security upgraded. No changes to program features.
